## About me

---

Whenever someone asks me what I do, I reply that "I create experience through lines of code"! I am always studying and looking for new challenges, because in technology the evolution is always continuous and the change is always present!

My main technical knowledge is: **Html, Css, Javascript, Typescript, React, NextJs, NodeJs, NestJs, Tests, Docker, Databases, CI & CD, Design knowledge, Figma, Photoshop, SEO knowledge, Clean Code and Clean Architecture**

---

## Experiences

---

**My first commercial experience** came during high school, at age 16, where I offered to create and maintain the school website! The website was simple and was created with only HTML, CSS and hosted on Heroku. But they were my first steps in programming!

**My second commercial experience** and first attempt to start a business was when I'm 19 years old, where during a conversation, I and a friend realized that micro and small companies would face a big financial problem with the reduction of its sales, because most of them are not present in the digital medium. It was then that we decided to develop an App (Sass) to help these companies sell their products in exchange for a commission on sales. But unfortunately this project did not work out, because we didn't have enough resources or the necessary business experience to do so! Our last attempt before putting this project on the fridge was to make a trip to talk to a possible investor in the state of MG, who was surprised by our attitude and advised us to wait for the moment sure things would happen! Looking back I don't regret anything I did! I learned a lot and met amazing people during the process that I will take forever!

**I'm currently working at Mais Retorno!** I joined here in 2020 as a Frontend programmer, but soon I also started working on the backend! Today I am a Fullstack programmer, and in this short period of time I was able to bring performance improvements to our tools; I worked on improvements SEO on news pages for better Google engagement; and collaborated on test coverage and code refactoring using standards such as clean code and clean architecture in addition to some design patterns.

"Capricho is when you do your best, under the conditions that you have, until you have better conditions to do even better!"

**Mario Sergio Cortella**
